

Here's what YOU can do about POLLUTION!!!

Starting today, you can buy your electric energy (either all of it, or just one-half of it) from a couple of companies that don't pollute our planet. These companies use wind, or geothermal, or water power to generate their electricity. They don't burn coal, which causes **a lot** of the pollution of our air in New England.

Don't worry; please be assured that nothing will change (no new wires, no new bills, etc.) if you sign up to buy your power from a clean source. Your regular electric bill will just list the clean company as your source of electricity. Be advised that the change over to clean power will cost you approximately \$3-6 dollars a month more than you currently pay. But those folks who have already changed over have big smiles about it. They are actually doing something, not just talking, about pollution. They now have a good answer when their grandchildren ask them – “What did you do to help clean up the world that you passed on to us?”

And here's a bonus; you can also help our town. For every 100 clean energy signups, Rocky Hill gets a *free* large, expensive solar panel to use on our town buildings. (West Hartford already has several.)

Also, be alerted – Rocky Hill is now in a contest with Cromwell to find out which town will bet more clean energy signups – and be in the newspapers with the bragging rights!

Rocky Hill – Let's win and be proud!!!
